Summary

Computer Science (AI & ML) student at VIT Bhopal with hands-on experience building end-to-end AI, machine learning, and data engineering solutions. Currently working at Deloitte on an autonomous AI agent for meeting documentation using LangChain, LangGraph, and locally hosted LLMs, and previously built Python-based ETL pipelines processing 50K+ records/day on Google Cloud. Strong foundation in Python, C++, machine learning, NLP, deep learning, backend development, and cloud technologies, with experience taking projects from data and model development through API integration and deployment. Passionate about solving complex engineering problems, learning quickly, and building reliable, scalable systems that create real-world impact.

EDUCATION

VIT Bhopal University

Sep 2023 – Present

B.Tech in CSE with specialization in AI & ML – (CGPA: 9.07)

EXPERIENCE

Technology & Transformation Intern | Engineering, AI & Data (Full time)

July 2026 – Present

Deloitte Touche Tohmatsu India LLP | Mumbai, India

- Engineer an autonomous AI agent for automated Minutes of Meeting (MoM) generation by processing live meeting transcripts and screen-shared audio, using LangChain and LangGraph to orchestrate multi-step agentic workflows and Ollama-hosted open-source LLMs to keep client and confidential data within the local environment.
- Serve as a core contributor to end-to-end product development, including React.js frontend development and integration with AI/backend functionality, while collaborating with cross-functional teams to build scalable technology solutions aligned with business requirements.
- Contribute to the consulting and client-facing lifecycle, translating business requirements into Software Requirements Specifications (SRS) and Functional Requirements Specifications (FRS), and participating in stakeholder discussions to communicate and refine technical solutions.

Data Engineering Intern (Remote, Part time)

Feb 2026 – June 2026

Estyl | Italy

- Built and optimized Python-based ETL pipelines processing 50K+ structured records/day, transforming data for downstream analytics and machine learning workflows.
- Leveraged Google Cloud Platform (GCP) services for data ingestion, transformation, and storage, contributing to reliable and scalable cloud-based data pipelines.
- Collaborated with international remote engineering teams to troubleshoot pipeline issues, improve data-processing efficiency, and strengthen overall pipeline reliability.

PROJECTS

BizChain AI – Role: Architect & Sole Developer

AI-Driven Analytics Platform

Flask, Time Series Forecasting, BERT, REST APIs, Node.js

- Built an **end-to-end AI analytics platform** that converts social and business data into actionable insights.
- Implemented **BERT-based NLP models** to perform sentiment analysis across multi-platform datasets.
- Developed **time-series forecasting models (Prophet, ARIMA)** to predict financial and marketing trends.
- Designed an **AI decision engine** that analyzes datasets and generates data-driven business recommendations.

MindWell – Role: Architect & Sole Developer

Artificial Intelligence & Gen AI Project

APIs, Flask, Tensorflow, Hugging Face

- Developed an **AI-powered mental health platform** integrating journaling, mood tracking, and community interaction.
- Built a **conversational AI chatbot** using Gemini API for emotional support and guidance.
- Implemented **content moderation using Google Perspective API** to ensure safe user interactions.
- Integrated **MediaPipe Pose Landmarker** to provide real-time movement analysis and feedback.

AgriTech – Role: Machine Learning Engineer

Machine Learning Project

Python, Scikit-Learn, Flask

- Designed and deployed an AI-powered agricultural intelligence system using Scikit-learn and Flask
- Achieved **99.3% accuracy** for crop recommendation using Random Forest.
- Achieved **93.5% accuracy** for crop yield prediction using XGBoost based on season, state, and area data

TECHNICAL SKILLS

Core Computer Science: Data Structures & Algorithms, Object-Oriented Programming (OOPs), SQL Queries, DBMS, Operating Systems (Linux)

Languages: Python (NumPy, Pandas, Matplotlib, Seaborn), C++

ML & Data Science: Supervised & Unsupervised Learning, Feature Engineering, Model Training, Hyperparameter Tuning, Model Evaluation (Accuracy, F1, AUC), Scikit-learn, Probability, Statistics

Deep Learning: Neural Networks, CNNs, RNNs, LSTMs, Transformers; TensorFlow, Keras, PyTorch, LinkNet, U-Net

NLP & Generative AI: Text Preprocessing, Sentiment Analysis, Embeddings (Word2Vec, BERT), Google Gemini API, Open-Source LLMs (DeepSeek, Qwen), LLM Inference & Serving (vLLM, Ollama)

Web & Deployment: HTML, CSS, JavaScript (Frontend integration for ML models), Flask, RESTful API Integration, Asynchronous Task Processing (Celery, Redis), React.js

Cloud, Databases & Tools: Google Cloud Platform (GCP), Amazon Web Services (AWS), MySQL, PostgreSQL, Git, GitHub, Linux

Soft Skills: Intellectual Curiosity, Humility, Analytical Thinking, Problem Solving

ACHIEVEMENT

HackLoop Hackathon– 2nd Runner Up

- Secured 2nd Runner-Up out of 500+ teams at HackLoop Hackathon 2025, demonstrating innovation and problem-solving.
- Collaborated in a team to build and present a tech-driven solution, showcasing strong technical expertise and teamwork.
