Summary

Machine Learning Engineer and B.Tech CSE (AI & ML) student at VIT Bhopal with experience developing end-to-end ML systems using Python, TensorFlow, Scikit-learn, and Flask. Built AI solutions including sentiment analysis systems, agricultural prediction models, and AI-powered mental health platforms with up to **99% model accuracy**. Experienced in **data pipelines, NLP, deep learning, and cloud-based ML workflows (GCP)**. Open-source contributor (GSSoC) and hackathon finalist passionate about building scalable AI-driven products.

EDUCATION

VIT Bhopal University <i>B.Tech in CSE with specialization in AI & ML – (CGPA: 9.08)</i>	<i>Sep 2023 – Present</i>
Progressive English Medium School <i>Higher Secondary School – (Percentage: 86)</i>	<i>June 2021 – May 2023</i>
Adinath English Medium School <i>Secondary School – (Percentage: 97.40)</i>	<i>June 2020 – May 2021</i>

EXPERIENCE

AI Engineering Intern (Remote) <i>Aurora Financials (New Zealand)</i>	<i>April 2026 – Present</i>
- Owned the end-to-end development of a production-grade AI SaaS system, from system design to deployment and scaling. - Architected and deployed scalable AI/data pipelines on GCP, enabling efficient ingestion, transformation, and processing of real-world datasets. - Designed robust backend systems with APIs, job queues, and distributed workflows for high-performance AI applications. - Created evaluation pipelines to track model performance, detect drift, and continuously improve system accuracy.	
Data Engineering Intern (Remote) <i>Estyl – (Italy)</i>	<i>Feb 2026 – Present</i>
- Developed and optimized ETL pipelines for structured datasets using Python. - Utilized Google Cloud Platform (GCP) services for data ingestion, transformation, and storage. - Processed and prepared datasets to support analytics and machine learning workflows. - Collaborated with international remote teams to improve data pipeline efficiency and reliability.	

PROJECTS

<u>BizChain AI</u> – Role: Architect & Sole Developer <i>AI-Driven Analytics Platform</i>	<i>Flask, Time Series Forecasting, BERT, REST APIs, Node.js</i>
- Built an end-to-end AI analytics platform that converts social and business data into actionable insights. - Implemented BERT-based NLP models to perform sentiment analysis across multi-platform datasets. - Developed time-series forecasting models (Prophet, ARIMA) to predict financial and marketing trends. - Designed an AI decision engine that analyzes datasets and generates data-driven business recommendations.	
<u>MindWell</u> – Role: Architect & Sole Developer <i>Artificial Intelligence & Gen AI Project</i>	<i>APIs, Flask, Tensorflow, Hugging Face</i>
- Developed an AI-powered mental health platform integrating journaling, mood tracking, and community interaction. - Built a conversational AI chatbot using Gemini API for emotional support and guidance. - Implemented content moderation using Google Perspective API to ensure safe user interactions. - Integrated MediaPipe Pose Landmarker to provide real-time movement analysis and feedback.	
<u>AgriTech</u> – Role: Machine Learning Engineer <i>Machine Learning Project</i>	<i>Python, Scikit-Learn, Flask</i>
- Designed and deployed an AI-powered agricultural intelligence system using Scikit-learn and Flask - Achieved 99.3% accuracy for crop recommendation using Random Forest. - Achieved 93.5% accuracy for crop yield prediction using XGBoost based on season, state, and area data	

TECHNICAL SKILLS

Core Computer Science: Data Structures & Algorithms, Object-Oriented Programming (OOPs), SQL Queries, DBMS, Operating Systems (Linux)

Languages: Python (NumPy, Pandas, Matplotlib, Seaborn), C++

ML & Data Science: Supervised & Unsupervised Learning, Feature Engineering, Model Training, Hyperparameter Tuning, Model Evaluation (Accuracy, F1, AUC), Scikit-learn, Probability, Statistics

Deep Learning: Neural Networks, CNNs, RNNs, LSTMs, Transformers; TensorFlow, Keras, PyTorch

NLP & Generative AI: Text Preprocessing, Sentiment Analysis, Embeddings (Word2Vec, BERT), Google Gemini API

Web & Deployment: HTML, CSS, JavaScript (Frontend integration for ML models), Node.js, Express.js, Flask, RESTful API Integration

Cloud, Databases & Tools: Google Cloud Platform(GCP), Amazon Web Services(AWS), MySQL, Git, GitHub, Linux

Soft Skills: Intellectual Curiosity, Humility, Analytical Thinking, Problem Solving

ACHIEVEMENT

HackLoop Hackathon– 2nd Runner Up

- Secured 2nd Runner-Up out of 500+ teams at HackLoop Hackathon 2025, demonstrating innovation and problem-solving.
- Collaborated in a team to build and present a tech-driven solution, showcasing strong technical expertise and teamwork.
